

The 6170+, 4170+ & 8170+ Valve Motor Drive Controllers...

The 6170+, 4170+ and 8170+ from West are a new improved range of Valve Motor Drive (VMD) controllers. The new + Series VMD controllers have been specifically designed for open loop valve motor drive applications and feature an improved + Series interface and greater field flexibility.

A unique VMD tuning algorithm continuously monitors the process to provide stable control at all times. In addition to the VMD outputs, further output options exist which can be designated as outputs for alarms, 24VDC transmitter power supply or retransmit of process value or setpoint.

Our new 6170+, 4170+ and 8170+ Valve Motor Drive controllers use the proven reliability of existing models, PLUS great new features that makes them more versatile and even easier to set up and use.

The VMD controllers share the same distinct styling as existing West + Series models, ensuring that the 'family' approach is maintained throughout the entire product range.

Some of their new improved features include:

- Auto Detected Hardware - to reduce set up times
- Jumperless Configuration
- Process & Loop Alarms
- Auto or Manual Tuning
- Motorised Valve Control
- Ramping Setpoint
- Remote/Dual Setpoint Options
- Modbus Communications
